

FERTILISER GUIDE

Due to the ongoing development of the suburban landscape, vital nutrients needed for turf growth are scarce in our soil. Because of this, it is important that turf owners provide these nutrients on a regular basis. Recent research found that few fertilisers provide these necessary nutrients, Eco growth however; a WA owned company, have developed a range of fertilisers that will help you to provide your turf with all that it needs. For the best results we recommend that turf owners use a fertiliser spreader for even distribution. Fertilising should be done at least before each season, or ideally every 6–8 weeks throughout the year. Once applied, the area should be watered thoroughly to dissolve the fertiliser into the soil.

If you have any questions about any of our Eco growth products, please contact one of our friendly sales consultants on 9453 6222 or if you would like helpful reminders on how and when to attend your turf, join our mailing list by emailing : turfsales@lovegroveturf.com.

Eco prime NPK Red is our recommendation for new and established lawns due to its good balance of the NPK ingredients. Nitrogen will green and feed the leaf, Phosphorus helps to encourage healthy root growth and Potassium will help to strengthen the overall plant. Using **NPK Red** on established lawns towards the end of May can help to reduce stress caused by our harsh winters. **NPK Red** is recommended for your general long term fertilising and if used every 6-8 weeks will keep your lawn green and healthy. It is a controlled release fertiliser and is environmentally friendly.

The following Rates should be followed for application.

Establishing, repairing or heavy application - 10kg per 50m².
 Please ensure to water thoroughly.

General application – 10kg per 100m².

NPK Red contains the following ingredients:

N%	P%	K%	C%	Ca%	Mg%	S%	Si%	Fe%	Cu	Zn	Mn	B	Co	Mo
									ppm	ppm	ppm	ppm	ppm	ppm
6.6	8.0	8.9	7.1	9.0	0.6	6.2	3.5	0.8	25	78	1827	8	8	5

To keep your lawn healthy, fertilise **at least** once before each season.

A general application done every 6–8 weeks throughout the year is ideal for a green, healthy lawn.

Remember, always water thoroughly to activate the fertiliser and prevent any possible leaf burn.

WA owned and operated Eco growth is a national manufacturer/distributor of quality fertilisers.

Eco prime Emerald contains a high amount of Nitrogen and will give a quick greening effect. We do not recommend that you use Emerald exclusively as the Nitrogen will encourage leaf growth but will not contribute to a healthy root system.

General application - 10kg per 100m².
 Emerald contains the following ingredients:

N%	P%	K%	C%	Ca%	Mg%	S%	Si%	Fe%	Cu	Zn	Mn	B	Co	Mo
									ppm	ppm	ppm	ppm	ppm	ppm
17.5	1.13	9.50	6.83	4.09	0.97	11.5	1.77	1.07	22	93	5800	11	8	1

Both NPK Red and Emerald are available for purchase at
 41 Brentwood Road,
 Wattle Grove

\$50 for a 25kg Bag
 (covers 250m²)
