## BENTONITE CLAY

20kg  
Covers 10m<sup>2</sup>

### WHAT IS IT?

Bentonite is a natural clay product with no added chemicals, it provides long term benefits for water and fertiliser efficiency which saves you money and time. Bentonite clay needs to be incorporated into your soil along with organic matter like Humus.

### WHY USE IT?

When used in conjunction with compost Bentonite Clay can:

- Aid soil wetability
- Increase water holding capacity
- Improve soil structure
- Enhance soil biological activity

Economical benefits:

- Avoid labour and the costs of removal and disposal of existing soil
- Avoid the cost of new top soil ( Estimated cost for removal of existing soil and new soil brought in is \$80 per 10m<sup>2</sup> - excludes labour)
- Limit damage to the environment caused by mining precious topsoils for use in domestic lawns

### HOW TO USE IT?

New or renovated lawns

- Spread clay granules over surface of cleared soil at rate of 2kg per 1m<sup>2</sup>.
- Spread compost (eg : Humus 400) over soil at the same time. 20Lt bag covers up to 50m<sup>2</sup>. Mix this and Humus (20LT per 50m<sup>2</sup>) into the soil to depth of 150-200mm.

## HUMUS 400

20lt  
Covers 50m<sup>2</sup>

### WHAT IS IT?

Humus 400 is designed to:

- Increase nutrient holding capacity of soil
- Increase water penetration in water repellent soils
- Humus holds up to 4 times its weight in water
- Loosen compacted soils such as hard clays
- Helps to quickly activate Minerals, Lime, Gypsum, etc.

## GYPSUM

5kg  
Covers 5m<sup>2</sup>

### WHAT IS IT?

Gypsum is designed to:

- Changes hard, compact soil into open, workable soil
- Increase water penetration and aeration by improving soil structure
- Aids drainage of wet soils, decreasing the risk of root rot
- Easy to apply and effects last for several years

### HOW TO USE IT?

Work well through top 100mm of soil ensuring that the clay is broken. 1kg per m<sup>2</sup>.

## DYNAMIC LIFTER

25kg  
Covers 125m<sup>2</sup>

### WHAT IS IT?

Dynamic Lifter adds nutrients and organic matter to the soil which improves moisture retention and promotes microbial and earthworm activity.

To Apply:

Mix through 10kg per 50m<sup>2</sup> of Dynamic Lifter to your soil.

## NPK RED FERTILISER

25kg  
Covers up to 250m<sup>2</sup>

### WHAT IS IT?

Eco prime Red is our recommendation for new lawns due to its capacity to help in root growth.

NPK Red is able to do this because of its phosphorus content which in conjunction with nitrogen and potassium will help to strengthen your recently harvested roots. NPK Red is recommended as a general fertiliser for new and existing lawns to promote healthy roots and increase the overall health of your lawn.

## HOW TO USE IT?

Establishing or repairing- 10kg per 50m<sup>2</sup>.  
Place below turf when establishing and water thoroughly

Winter application- 10kg per 100m<sup>2</sup>.

For optimum health of your lawn it is recommended to fertilise at a maintenance rate of 10kg per 100m<sup>2</sup> every 6-8 weeks.

Remember, always water thoroughly to activate the fertiliser and prevent any possible leaf burn.
